Use-Based Infrastructure (UBI)

The traditional method of acquiring hardware and software takes the form of either direct purchase or leasing. In the technology area, changes occur rapidly making traditional options a little less attractive.

Simply put UBI is a use-only infrastructure solution. It is "Infrastructure As A Service".

The UBI program covers items deployed specifically for the benefit of the client either at client location or our [datacenter](#).

Replacement, warranty, and upgrades are all included in the monthly fees.

- No more up-front cash outlays!
- Never own outdated equipment!
